

GARDEN FITTINGS AND ACCESSORIES

Palaplast in the continual attempt to provide a comprehensive range of products has moved forward in the design and production of quick lock garden fittings. These fittings are distinguished for their quality and their ergonomic design. The series of garden products provide practical solutions, easy handling even to those with little knowledge to irrigation applications.

The range includes:

• **Garden hose mender $\frac{1}{2}$ " and $\frac{3}{4}$ "**: for the easy and quick connection between two garden hoses $\frac{1}{2}$ "- $\frac{5}{8}$ " and $\frac{3}{4}$ ".

• **Garden hose connector $\frac{1}{2}$ " and $\frac{3}{4}$ "**: for the easy and quick connection, disconnection between garden hoses $\frac{1}{2}$ ", $\frac{5}{8}$ " and $\frac{3}{4}$ " and tap adaptor female or male, twist nozzle sprayer, and spike for sprinkler $\frac{1}{2}$ " with snap on.

• **Hose connector male $\frac{3}{4}$ "**: for the easy and quick connection to female threaded $\frac{3}{4}$ " fittings, and with lock fittings 16mm and 20mm.

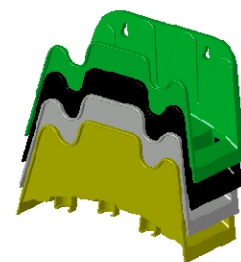

• **Tap adaptor female $\frac{3}{4}$ " and 1"**: for the easy and quick connection to taps or with male threaded fittings $\frac{3}{4}$ " and 1".

• **Tap adaptor male $\frac{3}{4}$ "**: for the easy and quick connection to taps or with female fittings $\frac{3}{4}$ ".

• **Twist nozzle spray**: a user friendly fitting, compatible with other garden fittings. With the use of the garden hose connector it is connected to the garden hose. By turning the twist nozzle (front end of fitting) to the left or right the flow of the water is regulated from jet to fine spray and can also be shut off. Ideal for watering lawn, pot plants, car washing etc.

•**Garden hose hanger:** an ideal and simple solution for tidy garden hose in the garden, balcony. The garden hose hanger is easily installed and available in various colors. The garden hose hanger has notches at the bottom for weight endurance and special positions for tidy placement of garden fittings.

All the above items were developed and produced to complement the already available Palaplast garden products, aiming to provide complete, easy and economical solutions to customer needs.

•**Spike for 1/2" sprinkler:** used as a support for 1/2" sprinklers, a quick, easy and economical solution for irrigating parks, gardens etc. Easily handled by pinning the spike into the soil and threading to the top the 1/2" sprinkler. Available in three connections quick lock, threaded, and lock connection for easy attachment to garden hose or PE pipe. Easily removable spike also allows the re-location of the sprinkler covering more irrigation surface with fewer sprinklers.

•**Sprinkler 1/2":** for irrigating parks and crops. For irrigation to parks used with spike (as detailed above). Available with four color coded nozzles pending on irrigation requirements and thus covering a range of discharges. Works well with low pressures and provides solutions to household garden irrigation where pressure rates are usually low.

The angle from 0° to 360° of the Sprinkler 1/2" can be easily adjusted by rotating to the left or the right the two rings that are found on the body of the sprinkler.

The maximum irrigation radius depends on the nozzle used and the working pressure of the network. Reduction of the radius can be achieved with the help of the dispersion screw found at the front of the sprinkler.
